
SOCIAL MEDIA PERFORMANCE ANALYSIS

Analytics Request Brief

From: Sarah Chen, Director of Digital Marketing

To: Analytics Team

Date: March 2026

Subject: Social Media Performance Analysis & Dashboard Development

Background

Our agency manages social media marketing for a consumer lifestyle brand across Instagram, TikTok, Twitter/X, and Facebook.

Over the past year, the marketing team has published hundreds of posts across multiple content formats as part of several marketing campaigns. While overall reach appears strong, our team lacks a structured view of which strategies actually drive meaningful engagement and audience growth.

Currently, marketing decisions — including platform focus, content production, and campaign allocation — are largely based on intuition rather than data.

We need a data-driven analysis to guide our upcoming Q2 marketing strategy.

Business Problem

Our reporting currently focuses on vanity metrics such as likes and impressions. These numbers alone do not provide insight into content effectiveness or marketing ROI.

The leadership team cannot confidently determine:

- Which platforms generate the highest engagement relative to impressions
- What content formats (video, image, carousel, text) perform best
- Which marketing campaigns drive meaningful engagement and follower growth
- Whether high impressions actually translate into engaged audiences
- What patterns should influence our future content strategy

Without clear analytical insights, we risk:

- Allocating budget to low-performing platforms
 - Producing content formats that do not resonate with audiences
 - Missing opportunities to scale high-performing campaigns
-

Analytics Objective

Your task is to analyze historical social media performance data and build an interactive Excel dashboard that enables leadership to evaluate:

- Platform performance
- Content effectiveness
- Campaign outcomes
- Engagement trends over time

The goal is to support data-driven marketing decisions for upcoming campaigns.

Key Business Questions

Your analysis should help answer the following:

Platform Performance

- Which platform generates the highest engagement rate?
- Which platform drives the most impressions and engagement overall?

Content Strategy

- Which content format performs best?
- Are certain formats more effective on specific platforms?

Campaign Effectiveness

- Which campaigns generated the most engagement and follower growth?
- Which campaigns underperformed?

Engagement Efficiency

- Does higher impressions volume lead to stronger engagement, or are we simply reaching passive audiences?

Content Outliers

- Which individual posts significantly outperform others?
-

Key Metrics

Your analysis must include the following KPIs:

- Total Impressions
- Total Engagement
- Engagement Rate
- Average Engagement per Post
- Followers Gained
- Campaign Performance

All metrics MUST be calculated as DAX measures within the Excel Power Pivot Data Model. This is a core requirement for proper analytical infrastructure.

Required Tools

The analysis must be built using:

- Excel Power Pivot (Data Model)
 - DAX measures
 - Pivot Tables
 - Pivot Charts
 - Slicers for interactivity
-

Deliverables

1. Data Model

A structured dataset loaded into the Excel Data Model including:

- Clean dataset

- Calculated measures using DAX
- Appropriate data structure for analysis

2. Two-Page Interactive Dashboard

Page 1 — Executive Overview

A high-level performance summary including:

- KPI summary metrics
- Platform performance comparison
- Content type performance
- Engagement trend over time

Purpose: Provide leadership with a quick performance snapshot.

Page 2 — Deep Analysis

Detailed analysis including:

- Platform vs Content Type comparison
- Top performing posts
- Campaign performance analysis
- Engagement vs Impressions relationship

Purpose: Identify drivers of engagement and campaign effectiveness.

3. Strategic Insight Memo

Prepare a short summary (1–2 pages) answering:

- What content strategy should the company prioritize?
- Which platforms deserve more marketing investment?
- Which campaigns should be replicated or discontinued?
- What actionable insights should guide the upcoming content calendar?

Your recommendations must be supported by data from the dashboard.

Timeline

Initial analytical dashboard and findings should be delivered within two weeks in preparation for the Q2 marketing planning session.

Estimated effort: 8–10 hours of analytical work
